transport and immunity.

Additional Systems and Their Collaborative Roles

Beyond the major systems, others contribute significantly through their interactions.

The Endocrine System and Other Systems

The endocrine system releases hormones that regulate various functions across different systems.

- **Regulation of Metabolism:** Hormones like thyroxine influence metabolic rate, impacting energy levels and growth.
- **Stress Response:** Cortisol and adrenaline prepare the body to respond to stress by affecting cardiovascular, muscular, and nervous systems.
- **Reproductive System Regulation:** Hormones control reproductive functions, interacting with the nervous and endocrine systems.

The Immune System's Role in System Cooperation

The immune system works with other systems to protect the body.

A: The respiratory system supplies oxygen to the lungs; the circulatory system transports oxygen-rich blood to tissues and returns carbon dioxide for removal.

The Muscular and Skeletal Systems in Movement

Movement requires the coordinated effort of muscles pulling on bones.

Process Overview:

- The nervous system sends signals to muscle fibers.
- Muscles contract via sliding filament mechanisms.
- Contraction pulls on bones at joints, producing movement.
