Sample Assessment Questions with Answers and Explanations

To illustrate how to approach assessment questions and verify answers, here are sample problems with detailed solutions.

Question 1: Triangle Congruence

Given two triangles with sides 7 cm, 9 cm, and 11 cm; and sides 9 cm, 11 cm, and 7 cm respectively. Are the triangles congruent? Explain.

Answer:

Yes, the triangles are congruent by the SSS (Side-Side-Side) theorem.

Explanation:

- Both triangles have three sides: 7, 9, and 11 cm.
- The order of sides does not matter; the sets of side lengths are identical.
- Since all three sides correspond in length, the triangles are congruent.

Question 2: Properties of Parallelogram

In a parallelogram, one angle measures 70° . What are the measures of the other angles?

Answer:

The angles are 70° and 110° .

Explanation:

- Opposite angles are equal: one angle is 70° , so its opposite is 70° .
- Consecutive angles are supplementary: $(70^\circ + \text{adjacent angle}) = 180^\circ$.
- Therefore, the adjacent angles measure $(180^\circ - 70^\circ = 110^\circ)$.

Question 3: Coordinate Geometry

Find the length of the segment connecting points A(2, 3) and B(6, 7).

Answer:

Using the distance formula:

$\sqrt{}$

$$d = \sqrt{(6 - 2)^2 + (7 - 3)^2} = \sqrt{(4)^2 + (4)^2} = \sqrt{16 + 16} = \sqrt{32} = 4\sqrt{2} \approx 5.66$$

\]

Explanation:

- Calculate the difference in x-coordinates: $6 - 2 = 4$.
- Calculate the difference in y-coordinates: $7 - 3 = 4$.
- Plug into the distance formula to find the length.
