- The young plant that grows from the germinated seed.
- Develops leaves and begins photosynthesis.
- Needs adequate light, water, and nutrients to grow.

4. Vegetative Growth

- The stage where the plant develops stems, leaves, and roots.
- The plant increases in size and biomass.
- Focused on establishing a strong structure for future reproduction.

5. Reproductive Stage

- The plant produces flowers or cones depending on species.
- Pollination occurs, often with the help of wind, insects, or animals.
- Fertilization leads to seed formation.

6. Seed Dispersal

- Seeds are spread away from the parent plant.
- Dispersal methods include wind, water, animals, or mechanical means.
- Ensures the propagation of the plant in new areas.

7. Maturation and Senescence

- Seeds mature and are ready for dispersal.
